

INTEROFFICE MEMORANDUM

DATE: September 1, 1971

TO: BRIDGE DESIGN PERSONNEL
FROM: Veral Pinkerton, Bridge Engineer
SUBJECT: Repetition of Design and Special Designs

It has come to my attention in the review of job progress and job files that some designers are spending a considerable amount of time designing components such as slabs, pile bents, etc., which have been designed and used on previous jobs.

Any design which has been used previously shall be considered as being satisfactory without further design unless a major change in the specifications has taken place. Special and unusual designs shall only be considered when approved by the squad supervisor.
